### **DETAILED ACTION**

### Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

1. Claims 36-40 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

In the present case, Claims 36-40 are seen to be code per-se and therefore, not useful, as evidenced by claim 40, which explicitly claims the apparatus to be a computer program, but no device for executing the program is recited and the program is never recited as executable.

# Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 19-20, 29-40 are rejected under 35 U.S.C. 102(e) as being anticipated by Laval et al (6,173,209).

As per Claim 19.

Laval et al ('209) discloses:

an electronic ticket information distribution store terminal for distributing electronic ticket information which authenticates a right to attend an event, see column 7, line 55 – column 8, line 2, wherein the electronic ticket information distribution store terminal receives a request to distribute an electronic ticket information concerning the event from a user of an information storage chip, see column 6, lines 33-39 and column

Application/Control Number: 10/700,014

Art Unit: 3628

8, lines 11-16, transfers the request to an electronic ticket distribution authentication apparatus so as to instruct the electronic ticket distribution apparatus to perform distribution authentication processing for determining whether the electronic information is to be distributed to the user, see column 6, lines 33-46, receives a ticket issuing request from an electronic ticket platform center for managing the distribution of the electronic ticket information and writes the electronic ticket information onto the information storage chip, see column 8, lines 3-28.

As per Claim 20.

Laval et al ('209) further discloses output means is provided for outputting the electronic ticket information as a paper ticket, see column 8, lines 22-24.

As per Claim 29.

Laval et al ('209) discloses:

forming event information unique to each of the events and registering the event information in the electronic ticket platform center by the event organizer apparatus, see column 16, lines 14-51;

receiving a request to distribute the electronic ticket information concerning the event from a user of the information storage chip, performing distribution authentication processing for determining whether the electronic ticket information is to be distributed to the user, and registering an authentication result in the electronic ticket platform center as ticket issuing information by the electronic ticket distribution authentication apparatus, see column 16, lines 14-51;

forming an electronic ticket information master based on the event information registered by the event organizer apparatus, relating the ticket issuing information registered by the electronic ticket distribution authentication apparatus to the electronic ticket information master, and performing ticket issuing processing for writing the electronic ticket information into the information storage chip based on the ticket issuing information by the electronic ticket platform center, see column 16, lines 14-51 and column 8.ines 11-28.

As per Claim 30.

Laval et al ('209) further discloses event organizer apparatus selects the electronic ticket distribution authentication apparatus for handling the electronic ticket information concerning the event, see column 8, lines 3-24.

As per Claim 31.

Laval et al ('209) further discloses the information storage chip is distributed as a membership card according to a membership registration via the electronic ticket distribution authentication apparatus, see column 8, lines 3-24.

As per Claim 32, 39.

Laval et al ('209) further discloses a predetermined time period is provided between the distribution authentication processing performed by the electronic ticket

Art Unit: 3628

distribution apparatus processing performed by the electronic ticket distribution authentication apparatus and the ticket issuing processing performed by the electronic ticket platform center, see column 7, lines 7-39 and column 11, lines 21-51.

As per Claim 33.

Laval et al ('209) further discloses the request to distribute the electronic ticket information from the user is sent and the ticket issuing processing is performed by the electronic ticket platform center via a network, see column 15, lines 52-63.

As per Claim 34.

Laval et al ('209) further discloses an electronic ticket information distribution store terminal is provided, and the request to distribute the electronic ticket information from the user is sent and the ticket issuing processing is performed by the electronic ticket platform center via the electronic ticket information distribution store terminal, see column 15, lines 39-51.

As per Claim 35.

Laval et al ('209) further discloses authentication processing by the electronic ticket platform center is required when the electronic ticket is written to the information storage chip, see column 15, lines 39-63.

As per Claim 36.

Laval et al ('209) discloses:

an electronic ticket assignment apparatus for controlling a reading/writing operation of electronic ticket information from and into an information storage chip in which a plurality of items of the electronic ticket information are stored, the electronic ticket information being used for authenticating a right to attend an event in correspondence with event information unique to each event, see column 7, line 55 – column 8, line 2, wherein the information storage chip of an assignor sends an assignment request to the electronic ticket assignment by specifying ID information of the information storage chip of an assignee and the electronic ticket information to be assigned, and the electronic ticket assignment apparatus performs an assignment operation by writing the electronic ticket information to be assigned into the information storage chip of the assignee in response to an assignment request and by deleting the assigned ticket information from the information storage chip of the assignor, see column 6, lines 33-46 and column 8, lines 11-16 and column 8, lines 3-28.

As per Claim 37.

Laval et al ('209) further discloses the electronic ticket assignment apparatus includes an electronic ticket platform center which authenticates a writing/deleting operation of the electronic ticket information, and a reader/writer for reading and writing the electronic ticket information from and into the information storage chip, see column 16, lines 14-48 and column 8, lines 3-28; and

Application/Control Number: 10/700,014

Art Unit: 3628

wherein the assignment request and the assignment operation are performed via a network, see column 16, lines 14-48.

Page 5

As per Claim 38.

Laval et al ('209) further discloses the electronic ticket assignment apparatus comprises an information storage chip reader/writer having a right to authenticate a writing/deleting operation of the electronic ticket information, see column 8, lines 3-28.

As per Claim 40.

Laval et al ('209) further discloses a computer program, see column 12, lines 18-22.

## Prior Art Made of Record

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

EP 0 969 426 to Goldstein et al is the closest foreign art.

TicketWeb Deploys First Ticketing Interface Into Raiser's Edge Software is the closest non-patent literature.

Art Unit: 3628

### Conclusion '

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thomas A. Dixon whose telephone number is (571) 272-6803. The examiner can normally be reached on Monday - Thursday 6:30 - 4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Hayes can be reached on (571) 272-6708. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
